

Linear Systems: Supply and Demand — Getting Started

Use this grid for questions 1 and 2 of the task.

Supply and Demand: BurgerRama Cartoon Dolls

To decide on an appropriate scale, look at the values in the table given that you will need to plot.

The highest selling price for a doll is \$4, so make your scale go a bit higher than this.

The highest number of dolls is 530 — so make your scale go to at least 600.

Make a BIG graph. Reading values from a large graph is much more accurate than trying to estimate from a very tiny graph.
